Subject: postponing mail???

Hi all...sorry for the wasted bandwidth, I am going to be away lots this summer and need to postpone....I assume the command sequence is SET MAIL POSTPONE, but what is the server address (lost my printout :-())

Stan, QRP-L #34, OHR Sprite 80, 38 Spec.

Subject: AM net 3871kc

Well I could hear quite a few people but was not able to check in....
will try again next week.....

From: Murray Kelly <mkelly@faraday.dialix.com.au>
Subject: New address here

I have been having a great deal of trouble accessing the provider here and consequently am moving on to the powerup.com. system.

mkelly@powerup.com.au

will find me. (Hopefully!)

The dialix system was OK except it was a shoestring server with way too few lines. They aim at 8-10 users / line! You can imagine the chaos at school holiday time.

Just amend your address book.

Subject: Re: AM Nets.

Hi Rich,

Nice to see you again last night on 7050!

I have a Allied Knight Kit T-150a transmitter that I would like to try out, but haven't heard any AM activity. 7090 is supposed to be a AM hangout. If you would like, we could set up a sked. Let me know.

My Glowbug projects in the works are:

1. 3 tube rcvr
2. 6AQ5 xtal osc. transmitter.
3. 2 tube electronic keyer.

Fun!

Guys:

Change the AM frequency listed below to *7290* !!!! 7090 is a CW only frequency in the USA.

From: Sandy W5TVW <ebjr@worldnet.att.net>
Subject: RE: 10 meters open

Today about 1900 GMT worked N8OHC in Ohio and AI9L in Illinois around 28060 khz. Been getting a few beacons here and there between

28200 and 28300. Looks like my HW-9 still works on 10 meters...about 2-1/2 watts out to a Butternut HF-6V vertical ground mounted.

Called CQ on 29 Mhz a few times with a 35 watt Elmac AF-67. No replies at all here.

Found at least one BA/GB out there!

Just worked W8AC, Jim near Cleveland, Ohio on 29 Mhz.

2335Z today.

Get those 10 meter rigs on guys

Eric,

Didn't see if you got the info you needed. If not, from my RCA Xmit
Tube Manual, TT-5, 1962, 801A:

Power triode used full power for AF or RF to 60 Mhz, reduced power to
120Mhz.

for Class B or C:

fil E 7.5 v @ 1.25 a.

amp factor 8

Max CCS DC plate E 600 v
Max-signal DC plate I 70 ma
Max sig input 42 w
plate diss 20 w
for class C operation: DC grid E -200 v

May be operated vertically with pins down or horizontally with pins 1
and 4 in a vertical plane. Plate shows no color at max CCS ratings.
